1.0 Introduction

Real estate consumer, investors and agents face so many challenges when they are looking for new home for the customer or for personal use, consumers always ask the nearest real estate agents to provide the best information about the home and then they find it difficult some time to know more detail or they need to invest too much time with agents for the visit of site etc.

Decision of buying a new home, renting out, and Commercial establishment space related research is shifted to internet.

End consumers, investors, agents and owners now meet at internet, the new point of communication for all research, data, information about the locality, property, prices, who's live nearby, which school located nearby etc and then go for final decision about the selected properties with agents, builders and owners.

This trend of home / office or real estate search bring new business opportunity for companies who want to make the home search an easy option for consumers and get paid for the services. There is several kinds of revenue model work on real estate portal industry and one can get a market place as per the business proposition, media coverage, investment capacity and market potential.

Techzone with more than 10 + years of Experience in technology development provide end to end property portal developments, managements, and Design, implementation, marketing and maintenance services.

Market potential – Real estate market is growing by 20 to 25% on Asian region, 10 to 15 % in European Region and about 5 to 7 % in American region, the Russia and brazil like new market is growing really very fast, so the internet penetrations. The market potential for the real estate portal is very high and it can get leveraged when focus on technology, delivery and simplicity to provide information.
